Contents

1	The first tagged chapter	5
1.1	A published section	5
1.1.1	Published statements	5
2	A draft chapter	7
2.1	A mixed draft section	7
2.1.1	Published and provisional entries	7

Chapter 1

The first tagged chapter (Tag 0AB)

1.1 A published section (Tag 0ABCD)

1.1.1 Published statements (Tag 0ABCDS1)

Theorem 1.1.1 (Fundamental comparison) (Tag 0ABCDE1). If two objects satisfy the same universal property, they are uniquely isomorphic in the appropriate sense.

Definition 1.1.2 (Tag 0ABCDE2). A published object is an entry whose semantic content and permanent tag have been recorded in the global registry.

Theorem 1.1.3 (Tag 0ABCDE3). A permanent tag does not require the statement to have a title.

The local published structural references are [Chapter 1](#) (Tag 0AB), [Section 1.1](#) (Tag 0ABCD), and [Subsection 1.1.1](#) (Tag 0ABCDS1). The published statement references are [Theorem 1.1.1](#) (Tag 0ABCDE1), [Definition 1.1.2](#) (Tag 0ABCDE2), and [Theorem 1.1.3](#) (Tag 0ABCDE3).

The old identifier remains queryable as the frozen record [Tag System Test Book, Theorem 1.1.0, retired Tag 0ABCDE0; replaced by Tag 0ABCDE1].

Chapter 2

A draft chapter (Draft tag OCD)

2.1 A mixed draft section (Draft tag OCDEF)

2.1.1 Published and provisional entries (Draft tag OCDEFS1)

This section remains draft because it contains both published and draft entries.

Proposition 2.1.1 (Tag OABEF01). An individually published entry may remain inside a section that is still being drafted.

Theorem 2.1.2. This draft theorem has no provisional tag and therefore uses only its current structural location when referenced.

Example 2.1.3 (Draft tag OABEFZZ). A provisional draft tag is visible but is not reserved globally.

Remark 2.1.4 (Draft tag OABEFZZ). Repeating a provisional tag is permitted while the containing section remains draft. Publication validation will require a new unique registered tag.

The draft structural references omit provisional tags: [Chapter 2](#), [Section 2.1](#), and [Subsection 2.1.1](#).

The mixed-section references are [Proposition 2.1.1 \(Tag OABEF01\)](#), [Theorem 2.1.2](#), [Example 2.1.3](#), and [Remark 2.1.4](#).
